## SKILLS/EXPERIENCE

### PROFICIENT

- Java, Eclipse, IntelliJ
- git, svn
- Object orientated programming techniques
- Analytical, problem solving and debugging skills

### INTERMEDIATE

- JUnit
- Bash
- gradle

## WORK HISTORY

Jan 2014      **Software Developer**  
to              Greentube UK  
present       Nottingham

Currently working as a Java software developer creating casino games for online markets. I work within a small team to scope, design, produce, and maintain software solutions to game concepts. The role often requires moving between and managing multiple projects while keeping to a high standard of clean and maintainable code. All projects involve extensively working with third parties to make effective use of their SDKs and platforms.

Jan 2011      **Systems Tester**  
to              i-design  
Feb 2011      Dundee

This was a temporary position which lasted for approximately three weeks. I worked with other testers to find faults in a large software project before its release. The role involved working with the software teams to decide relevant tests and report results.

## EDUCATION

Sept 2007     **University of Abertay Dundee**  
to              Dundee  
Jun 2011

Bsc Computer Games Technology
